

# Rebate Scheme

## What is the Home WaterWise Rebate Scheme?

The Home WaterWise Rebate Scheme is a comprehensive package of incentives to help households in South-East Queensland save water.

It forms part of the south-east water plan which will provide more dams, introduce recycled water for industry, investigate desalination and a grid to connect all new and existing dams and establish the Queensland Water Commission to oversee supply and demand issues.

Through the Home WaterWise Rebate Scheme, South-East Queensland residents will be able to obtain new rebates for the following products from 1 July 2006\*:

- **\$1000 for rainwater tanks, pumps and diverters and installation**
- Up to \$200 to install an above-ground greywater system, and \$500 to purchase and install a below-ground greywater system
- \$200 for a new 4 star (or better) water rated washing machine (one washing machine per household)
- \$150 per suite for new dual-flush toilet suites, including installation, which will replace existing single flush toilets (for a maximum of 2 toilets suites)
- 50% of purchase price up to \$30 per showerhead for new 3 star (or better) showerheads (for a maximum of 3 showerheads)
- \$200 for pool covers, including rollers (minimum size is 25 square metres)

\*The total rebate received from your local council and the Queensland Government for any item cannot exceed the purchase price and installation cost. Rebates can only be applied for once the product is installed and operational.

## Where can I get more information?

Phone the water hotline on 1800 243 585.
